

MIRASOL SOLAR ENERGY SYSTEMS
IS PROUD TO BE THE NEW MEXICO DISTRIBUTOR FOR THE NEW
MADE-IN-AMERICA SPP-30A COLLECTOR!

**New SPP-30A Solar Thermal
Collector
Complies with Buy American Act**

**Accepting Orders In November For Q2 2010
Delivery**

Solar Panels Plus LLC (SPP) was already in the process of moving some of our solar thermal manufacturing to the USA before there was an economic meltdown and long before there was any such thing as the economic stimulus package presented by the **American Recovery and Reinvestment Act of 2009 (ARRA)**.

Beginning in November 2009, SPP will be accepting orders for it's new SPP-30A USA collector.

This is the same [record-setting 30-tube collector](#) that leads all others in SRCC tested performance. The new "A" model signifies that SPP will be using an anodized aluminum header in place of the industry-standard powder coated finish that was previously used, and more importantly, **the SPP-30A will be manufactured in the USA** primarily from USA sourced materials. The SPP-30A will ship with a "**Buy American Act**" label. The SPP-30A product will be available for deliveries beginning late Q1 2010. The existing SPP-30 will continue to be available during a transition period.

In addition to creating jobs in America, the SPP **Buy American Act compliant thermal collector** opens up **economic stimulus projects** to high performance evacuated tube collectors. The ARRA contains a provision rec the only Buy American Act compliant solar thermal collectors on the market have been the lower-performance flat-panel type collector. The SPP-30A now gives federal, state, local government and .edu projects the option t evacuated tube collectors.
